

# The RF-ITV Training Team's Tips and Tricks

## Line Path Options in Google Earth

While using the Google Earth options to track tags, you may have noticed that the track line of the shipments occasionally blends together with the background terrain. The following instructions will allow you to change the color of the shipment track line. These color changes help since various geographic areas use different colors and changing the shipment track color keeps it from blending in to the terrain color.

1. Choose which option you are using depending on if you are on NIPRNET or not.

The tracking of the tag will be displayed using Google Earth plug-in or the Google Earth program.

2. To change the line color, right click properties. This will bring up the menu line.

then select for the track line.

3. In the properties menu box, select the track color option under the **Style, Color** tab.

4. Select a color and click **OK**.

5. The track color of the tag has now been changed to the color selected by the user making it easier to see.
